

1. How your project will benefit from React

- What are the main differences between Bootstrap and React?

Bootstrap is a flexible framework of HTML, CSS and JS. Designed for mobile first

React is a Javascript library, It can render data without reloading the page.

They both can be run on npm but yarn works better with React.

- What will React allow you to do that would have been difficult with Bootstrap?

Ummmmm mmmm.. You can reuse React components.

2. Expected List of React Components

- A brief list of the React Components you will need to develop for your application

Not sure yet. I'm thinking both.

- Brief justifications for including these components

Zero justifications.. I'm still trying to figure out what would work best.

3. Team responsibilities

- Which team member will own the development of which React Component?

SOLO .
